Your Local Asphalt Sealcoating & Treatment Provider

Before sealcoating

After sealcoating

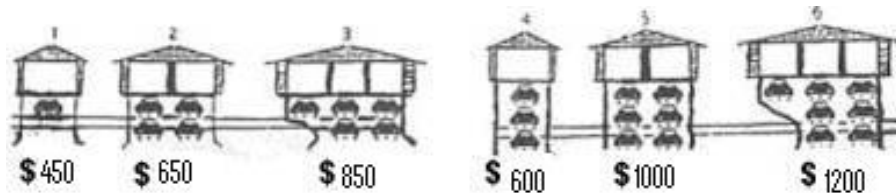

Why Seal Your Asphalt?

Sealcoated asphalt has a much longer life than that of an unsealed pavement. Sealcoating will preserve water and oxidizing effects of the sun, salts, and petroleum spillage. This coating preserves the pavement surface, and the asphalt and aggregate layers will remain protected and moist for flexibility.

Let's summarize the benefits of coal tar & asphalt emulsion sealer that are applied under pressure:

- Increases the esthetic value of property and home.
- Resistance to detergents used to clean pavements subjected to heavy fuel, oil or grease spillages.
- Excellent resistance to water and easy to clean and maintain.
- Unexcelled flexibility over a wide temperature range.
- Non-scuffing under normal conditions.
- Extends the service life of asphalt pavements.
- Dries to a velvety black color.
- Can be striped with water emulsion paints after the film is cured.

Here is what it costs to Seal your Asphalt Surface

Up to 1/2" Crack Repairs @ \$15.00/LF
